

Name: _____
Calculus Summer Packet

1.) Determine the x and y intercepts of $y = x^2 - 8x + 12$.

2.) Determine the value of "k" for which the graph of $y = kx^3$ pass through the point (-2,1).

3.) Determine the slope of the line that passes through the points (-7,8) and (-1,8).

4.) Determine the value of "t" such that the following points are collinear.

(-3,3), (t,-1), (8,6)

5.) Determine the equation of the line that passes through (2,4) with a slope of $-\frac{2}{3}$.

6.) Determine the equation of the line that passes through (2,4) and is perpendicular to the line $x + y = 0$.

7.) Determine the equation of the line that passes through points (2,4) and (6,1).

8.) Determine the equation of the line that passes through (2,4) and is parallel to the x-axis.

9.) The purchase price of a new machine is \$12,500 and its value will decrease by \$850 per year. Use this information to write a linear equation that gives the value V of the machine t years after it is purchased. Find its value at the end of 3 years.

For #s 10-12, refer to the given function, $f(x) = \begin{cases} x^2 + 2, & x < 0 \\ |x - 2|, & x \geq 0 \end{cases}$

10.) Determine $f(-4)$.

11.) Determine $f(0)$.

12.) Determine $f(1)$.

13.) Consider the equation $x = 9 - y^2$. Determine if this equation expresses y as a function of x and explain why.

For #s 14 and 15, refer to the equation $y = \frac{7}{2x-10}$.

14.) State the domain of this function.

15.) State the range of this function.

For #s 16-18, refer to the functions $f(x) = 1 - x^2$ and $g(x) = 2x + 1$.

16.) Evaluate $f(x) - g(x)$

17.) Evaluate $f(x)g(x)$

18.) Evaluate $g(f(x))$

19.) A wire 24 inches long is to be cut into four pieces to form a rectangle whose shortest side has a length of x .

a.) Write the area A of the rectangle as a function of x .

b.) Determine the domain of the function and use a graphing utility to graph the function over that domain.

c.) Use the graph of the function to approximate the maximum area of the rectangle. Make a conjecture about the dimensions that yield a maximum area.

20.) Given the circle $x^2 + y^2 - 6x - 8y = 0$, determine the center and radius.

21.) You are in a boat 2 miles from the nearest point on the coast. You are to go to a point Q located 3 miles down the coast and 1 mile inland. You can row 2 miles per hour and walk at 4 miles per hour. Write the total time T of the trip as a function of x .

22.) One of the fundamental themes of calculus is to find the slope of the tangent line to a curve at a point. To see how this can be done, consider point $(2,4)$ on the graph $f(x) = x^2$.

a.) Find the slope of the line joining $(2,4)$ and $(3,9)$. Is the slope of the tangent line at $(2,4)$ greater than or less than this number?

b.) Find the slope of the line joining $(2,4)$ and $(1,1)$. Is the slope of the tangent line at $(2,4)$ greater than or less than this number?

c.) Find the slope of the line joining $(2,4)$ and $(2.1,4.41)$. Is the slope of the tangent line at $(2,4)$ greater than or less than this number?

d.) Find the slope of the line joining $(2,4)$ and $(2 + h, f(2 + h))$ in terms of the nonzero number h . Verify that $h = 1, -1,$ and 0.1 yield the solutions to parts (a) – (c) above.

e.) What is the slope of the tangent line at $(2,4)$? Explain how you arrived at your answer.
